

BRAXTEN ORLINE P. URDELAS

Bachelor of Science in Information Technology — Freshman

Manila, Philippines | +63 910 715 9217 | braxtenorlineurdelas@gmail.com

github.com/Brax1000 | linkedin.com/in/braxten-urdelas | portfolio1-neon-chi.vercel.app

EDUCATION

Technological University of the Philippines - Manila
BS in Information Technology
Freshman | 2026 – Present

Dalandanan National High School
STEM Strand (Senior High School)
2022 – 2026

With Academic Honors
Batch Top 35th Graduate

TECHNICAL SKILLS

LANGUAGES
C, C++, JavaScript (ES6+), Python, Java

WEB DEVELOPMENT
HTML5, CSS3, DOM APIs, Responsive Design

FRAMEWORKS & TOOLS
Raylib (C Graphics/Audio), Git, GitHub, VS Code, Vercel

CORE COMPETENCIES
Algorithmic Problem Solving, Control Flow, State Machines, Software Architecture

ACHIEVEMENTS

- **STEM Academic Honors**: Diligence & academic excellence in Senior High School STEM program.
- **Batch Top 35th Graduate**: Ranked in top 35 graduating students of Batch 2025–2026.
- **Active Open Source Creator**: Maintained and published 4+ technical repositories on GitHub.

AFFILIATIONS & DIRECTION

- **Google Developer Groups on Campus (GDGoC)**: TUP Manila Student Developer Community member.
- **Target Direction**: Software engineering, systems programming, and scalable web solutions.

PROFESSIONAL SUMMARY

Dedicated BSIT freshman at Technological University of the Philippines - Manila with hands-on foundational experience in systems programming in C/C++, algorithmic problem-solving, and interactive web development. Proven track record of team collaboration, academic diligence, and practical project execution. Active participant in the Google Developer Groups on Campus (GDGoC) TUP Manila community, focused on engineering dependable software and expanding technical depth.

FEATURED PROJECTS

C-Four: Bomb Defusal Simulator

C • Raylib • Windows API

github.com/Brax1000/C_Four_GameDev

- Engineered a collaborative tactical minigame featuring dynamic range deduction (1–10 to 1–500) under an active 90-second countdown loop.
- Built the refined **C-Four2** edition using Raylib, implementing an 80×30 retro CRT interface with 4 swappable color themes, audio streaming, and particle explosion physics.
- Collaborated in a 3-member team (BSIT-1C), organizing modular C architecture, formal design specifications, and unit testing suites.

C.C Scientific Calculator

JavaScript (ES6+) • HTML5 • CSS3

github.com/Brax1000/C.C-Calculator

- Developed an interactive scientific calculator supporting complex arithmetic, square root, percentage, and mathematical operations.
- Engineered keyboard event interception, input sanitization to eliminate syntax errors, and a responsive glassmorphic user interface.

Basic Calculator

C++ • CLI Architecture

github.com/Brax1000/BasicCalc_CPP

- Engineered a performant command-line arithmetic processor in C++ implementing operator precedence and clean functional modularity.
- Applied robust input validation and defensive error handling to prevent runtime exceptions and division-by-zero crashes.

Hangman Word-Guessing Game

Python 3 • State Machine

github.com/Brax1000/Hangman-Game-in-Python

- Constructed a terminal-based word-deduction game featuring structured state transitions, letter history sets, and attempt counters.
- Designed dynamic ASCII gallows visualizations updated procedurally according to remaining player lives.
